## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/12/2006 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 5, 7-9, 11-14, and 16-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Iwasa et al (6,437,052).

Iwasa et al disclose a monomer having a diol structure meeting the instant claim limitations for use in a negative resist composition and patterning process. The alicycli diols comprise –OH groups on adjacent carbons (see columns 3 and 4). Suitable cycloolefins include adamantyl and norbornene structures. The resist further comprises a crosslinking agent, a PAG, and a solvent (see column 11). The resin coated onto a substrate, prebaked, exposed to light of a short wavelength such as 220 nm or shorter via an ArF laser, and developed (column 18). Suitable developers include 2.38 % TMAH. Given the teachings of the reference, the instant claims are anticipated.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 3, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwasa et al.

Iwasa et al has been discussed above, and further teaches that while not preferred, it is known in the art to include novolak monomers, or styrene based monomers in such compositions (column 1).

Given the teachings of the reference, it would have been obvious to one of ordinary skill in the art to prepare the material of Iwasa et al choosing to include an aromatic monomer in combination with the cyclic diol with reasonable expectation of achieving a material having high etch resistance.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Iwasa et al (2002/0016431), Harada et al (EP 1126322), Hanlon et al (4,767,550), Holdstock et al (2002/0042549), Becker et al (5,336,815), Lee et al (6,359,153), Narita et al (2004/0192867), Toishi et al (2003/0175620), and Rhodes et al (2003/0176583) are cited for their teachings of similar compounds.
